EXPERIENCE

UX-Embedded Developer | University of Western Ontario Aug 2025 – Jun 2026

- Added AI-supported reflection to a student well-being app, a need students raised during usability testing, by leading backend and RAG chatbot development on a 3-person team in Python and MongoDB
- Kept the built product consistent with the approved UX flows by translating screen designs into code and reviewing progress weekly with senior developers and a senior UX designer

UX Researcher & Designer | University of Western Ontario, USRI Research Program May 2025 – Aug 2025

- Validated a skill-building reflection flow, with 72% of student testers (13 of 18) saying it would support their daily well-being, by running usability tests across pre-survey, think-aloud and post-survey stages
- Designed 100+ mobile screens, from user flows and wireframes to high-fidelity Figma prototypes, by turning education faculty requirements and a literature review into a self-assessment that finds each student's weakest competency
- Refocused an overloaded prototype on one self-assessment and one skill path after a tester said the app had lost its purpose, by redesigning onboarding, reducing charts and analytics, and expanding reflection prompts
- Redirected the project away from sleep tracking toward three research-backed competencies by leading a literature review that showed sleep explained only part of student well-being
- Kept 100+ screens visually consistent by building a style guide from the senior designer's colour palette and icon set, and presented the work at a virtual research conference

PROJECTS

Fitoday | Social Outfit Feedback App (iOS), Self-Initiated, In Development Jun 2026 – Present

- Revised 3 core interactions (written comments, profile privacy, vote editing) by running think-aloud usability tests with 5 participants on a mobile prototype and tracing each change back to the product requirements
- Designed mobile user flows, wireframes, and high-fidelity Figma screens grounded in a 12-person survey and a competitive review of 4 platforms, writing the PRD first so every screen mapped to a requirement
- Building the app in Flutter and Firebase, with authentication and backend security rules in place and Cloud Functions in progress

HiHello | Digital Letter Web App, Self-Initiated Aug 2026

- Designed, built, and deployed a responsive web app for mobile and desktop in 5 weeks, going from Figma to a live Cloudflare deployment by using Claude Code for front-end implementation while making every interaction and layout decision

Wordtropolis | Gamified Spelling Game, HCI Course Project Apr 2026

- Kept a 6-person team's game visually consistent across 4 mission types and a boss battle by choosing the pixel-art direction and building the first mission as the template the team adopted
- Redesigned a low-engagement spelling tool for kids into a mission and boss-battle progression based on 3 learning-science principles, prototyped in Figma and built in Java Swing so the team could playtest pacing and feedback

SKILLS

Design: Figma, user flows, wireframes, high-fidelity mockups, prototyping, mobile app design, responsive web design, design systems, style guides, information architecture

Research: usability testing, user interviews, surveys, think-aloud studies, affinity mapping, personas, journey mapping, literature review

Collaboration: gathering stakeholder requirements, PRD writing, design reviews with engineering, presenting design rationale

AI Tools: Claude Code (AI-assisted prototyping and front-end build), ChatGPT (research synthesis)

Development: Python, MongoDB, FastAPI, React, Flutter, Dart, Firebase, Java, HTML, CSS

EDUCATION

Bachelor of Science, Computer Science (Specialization) | University of Western Ontario Jun 2026
