EXPERIENCE

UX-Embedded Developer | University of Western Ontario Aug 2025 – Jun 2026 (Remote)

- Built most of the backend for the student well-being app in Python and MongoDB on a 3-person team, shipping every API endpoint the screens needed and learning which design decisions survive real data.
- Kept the build aligned with the approved UX flows for 10 months by translating designs into code and walking through progress in weekly reviews with senior developers and a senior UX designer, sharpening how I explain design intent to engineers.

UX Researcher & Designer | University of Western Ontario, USRI Research Program May 2025 – Aug 2025 (Remote)

- Redirected the app from sleep tracking to 3 research-backed competencies (emotion regulation, resilience, social support) after a literature review and a 3-app competitive scan, dropping a finished sitemap.
- Made an academic framework scoreable by breaking the 3 competencies into 6 measurable skills with 3 levels each and mapping every skill to a feature before drawing a screen.
- Designed 100+ mobile screens, from personas, journey maps, and user flows to high-fidelity Figma prototypes, turning education faculty requirements into a self-assessment that finds a student's weakest competency and guides them to build it.
- Got 72% of participants (13 of 18) to say the reflection experience would support their daily well-being by running pre-survey, think-aloud, and post-survey sessions and turning the findings into 3 design changes.
- Refocused the prototype after a participant said it had "lost its purpose" by re-checking every feature against the research goals, cutting parallel tracking views and detailed analytics, and redesigning onboarding.
- Built a style guide (colour, type, icons) for 100+ screens and presented the final prototype at a research conference.

PROJECTS

Fitoday | Outfit Diary App (iOS), Solo Product Jun 2026 – Present

- Confirmed a gap in outfit feedback tools through a 12-person survey and a review of 4 platforms, finding people wanted honest feedback but feared being judged, and wrote the PRD before any wireframe.
- Designed about 100 screens across 8 flows on about 30 reusable Figma components, then ran 2 rounds of think-aloud testing with 5 people, adding a feedback note and 24-hour re-rating to fix what they ran into.
- Caught a cold-start problem before coding by reviewing outfit apps from 2008 to 2026, then pivoted to a private outfit diary that works with zero followers, costing a PRD rewrite instead of a rebuilt app.
- Cut predicted task failures from 6 to 3 and critical or high issues from 8 to 3 by running 2 rounds of AI-simulated usability testing (8 personas, 5 tasks each) on the V3 prototype before real users.

HiHello | Digital Letter Web App, Solo | Live Aug 2026

- Took a responsive web app from Figma to a live Cloudflare deployment in 5 weeks, designing 20+ screens and 6 postcard styles and using Claude Code to implement it while making every design decision myself.
- Designed friction on purpose (a "seal it" lock and a 5-day wait before opening); of the 8 letters sent, 2 of the 3 writers said they put more thought into them, and I scoped an A/B test of 24-hour, 5-day, and 14-day delays to validate the wait.

Wordtropolis | Gamified Spelling Game for Kids, HCI Course Project Apr 2026

- Set the visual direction for a 6-person team redesigning a spelling game into missions and a boss battle, choosing the pixel art style and building the first mission (about 10 screens) as the team's template.
- Kept screens from 5 builders consistent across 4 mission types with shared colours, layouts, and word blocks, earning 98%.

SKILLS

Design: Figma (Auto Layout, Components, Variants, Variables, Prototyping), user flows, wireframes, high-fidelity prototypes, interaction design, mobile and responsive web design, design systems, style guides, information architecture

Research: usability testing (in-person and AI-simulated), think-aloud studies, user interviews, surveys, competitive analysis, market research, affinity mapping, personas, journey mapping, literature review

Product: PRD writing, scoping and prioritization, stakeholder requirements, design reviews with engineering, design rationale

Tools: Claude Code, ChatGPT, Jira, Slack, Microsoft Teams, Adobe Photoshop

Development: Python, MongoDB, FastAPI, React, JavaScript, HTML, CSS, Java, Flutter, Firebase

Languages: English, Korean

EDUCATION

Bachelor of Science, Computer Science (Specialization) | University of Western Ontario Jun 2026
